How can I tell if my university computer is "managed" by OneIT?

Tell Me

University-managed computers connect to the wired/wireless network and adhere to certain standards and guidelines that help to minimize security risks. See this FAQ for more details.

Specialized computers and endpoints that DO NOT connect to the wired/wireless network are not considered managed devices.

1. The easiest way to identify a managed computer is to check and see if the university logo is on the background, or, on Windows computers, in the bottom right toolbar.
2. If there is no logo, check the following:

<table>
<thead>
<tr>
<th>Windows</th>
<th>Mac</th>
<th>Linux</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click in the bottom search tool bar, search for <strong>Control Panel</strong></td>
<td>Open <strong>Finder</strong></td>
<td>Check with your OneIT staff member or your unit IT Director.</td>
</tr>
<tr>
<td>In the Control Panel, search for <strong>Configuration Manager</strong></td>
<td>Search for <strong>Self Service</strong></td>
<td>If it is still unclear, complete this form. A member of the OneIT Security team will follow up with you within 2-3 business days.</td>
</tr>
</tbody>
</table>

If **Configuration Manager** is there, your computer is managed by OneIT.

If **Configuration Manager** is not there, complete this form. A member of the OneIT Security team will follow up with you within 2-3 business days.

If **Self Service** is there, your computer is managed by OneIT.

If **Self Service** is not there, complete this form. A member of the OneIT Security team will follow up with you within 2-3 business days.
